Does joint T+attribute splitting predict the background-knowledge benefit?
A: marital
B: education
Pearson r=-0.03 (p=0.22)
Spearman r=-0.02 (p=0.49)
n=1377
Pearson r=-0.03 (p=0.23)
Spearman r=0.00 (p=0.86)
n=1377
Error reduction vs. None
