Does joint T+attribute splitting predict the background-knowledge benefit?
Attribute A
Attribute B
Pearson r=0.06 (p=0.019)
Spearman r=0.07 (p=0.005)
n=1668
Pearson r=0.04 (p=0.083)
Spearman r=0.06 (p=0.0086)
n=1668
