Does solver agreement predict reconstruction correctness?
m = 10
m = 100
Spearman ρ=0.07
(p=1.9e-10, n=8000)
Spearman ρ=0.10
(p=2.2e-19, n=7600)
perfect calibration
Empirical accuracy
(fraction of rows correctly reconstructed)
Agreement rate across repeated solves
(confidence proxy)
